Da bi se izbjegla **deformacija panela** (PVC, ABS, HPL, ALU) - vanjska ploča dekorativnog panela **NIKAKO NE SMIJE BITI** fiksirana podloškom (kajlom), niti dodirivati gornju ni donju stijenku profila. Naime, između profila i vanjske ploče mora biti minimalno 3mm slobodnog prostora da bi ploča uslijed različitih vremenskih utjecaja imala prostora pri rastezanju i skupljanju (u skladu sa svojstvima svako pojedinog materijala od kojeg je načinjen panel). Ukoliko se dekorativni panel ipak mora fiksirati podloškom (što nikako nije naša preporuka) **NE SMIJE** se fiksirati vanjska stijenka dekorativnog panela, već samo dio od unutarnje ploče do ojačanja dekorativnog panela (na slici).
